DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/28/2008 has been entered.

Response to Arguments

1. Applicant's arguments with respect to claims 29-36 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 29, 30, 33, and 34 are rejected under 35 U.S.C. 102(b) as being anticipated by Voltz et al. (US 6,504,577 B1).

Consider claims 29 and 33, Voltz et al. teach an apparatus for processing video signals, comprising: a video decomposition section, which accepts an input composite video signal comprising a sequence of frames, each frame comprising an even field and

an odd field (150 of Fig. 2, and Fig. 3), acquires a first reproduction output video signal by copying data of the odd field of each frame to the even field of the same frame (Fig. 6A and Fig. 6B, and col. 13, lines 27-52), and acquires a second reproduction output video signal by copying data of the even field of each frame to the odd field of the same frame (Fig. 6A and Fig. 6B, and col. 13, lines 27-52).

Consider claims 30 and 34, Voltz et al. teach the apparatus comprising an interpolation section, wherein each of a first frame and a second frame comprises an even field and an odd field (col. 13, lines 27-52), wherein the interpolation section uses interpolation to provide an odd field that is added to the first frame and an even field that is added to the second frame (Fig. 6A and Fig. 6B).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 31, 32, 35, and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Voltz et al. (US 6,504,577 B1) in view of Watanabe (6,002,835).

Consider claim 31, Voltz et al. teach all the limitations in claim 29 but do not explicitly teach the apparatus comprising a decompression section coupled to the video decomposition section, wherein the decompression section accepts an input

compressed composite video signal and provides, uncompressed, the composite video signal input to the video decomposition section.

Watanabe teaches the apparatus comprising a decompression section coupled to the video decomposition section, wherein the decompression section accepts an input compressed composite video signal and provides, uncompressed, the composite video signal input to the video decomposition section (34 of Fig. 4). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to decompress the compressed video signal to reproduce the video signal on a display.

Consider claim 32, Watanabe further teaches the apparatus comprising: a recording medium (2 of Fig. 4); and a reader coupled to the decompression section and configured to read from the recording medium, the reader acquiring the compressed composite video signal from the recording medium (31 of Fig. 4).

Consider claim 35, Watanabe further teaches the method further comprising accepting an input compressed composite video signal (Fig. 4); and decompressing the input compressed composite video signal (Fig. 4).

Consider claim 36, Watanabe further teaches the method further comprising acquiring an input compressed composite video signal from a recording medium (Fig.4).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TAT CHI CHIO whose telephone number is (571)272-

Application/Control Number: 10/824,912 Page 5
